

GLA SERIES

COMPACT CNC TURNING CENTERS

THE ULTIMATE MACHINING POWER
WOODWAY

COMPACT CNC TURNING CENTERS

The world is constantly changing, manufacturers face fast lead time and less profit subject. It is urgent need to source high price-performance ratio equipment to increase productivity. GOODWAY GLA series is epoch-making product that can satisfy this requirement. This series is developed based on small parts processing, small floor space but with excellent processing capacity. From single machine to automation production can find a best way to meet all processing requirements.

To provide best price-performance ratio on turning centers with 6" chuck.

Compact machine design, economical component cost, flexible automation integration capability.

Maximum unit space output value, never seen before!

(GLA-1500 model shown with optional accessories.)

Compact Machine Size

According to optimization contracture design, GLA series achieve extremely small floor space. Compare to other 6" chuck GOODWAY machine, GLA series machine size decrease 30%. Especially the machine width is only 1,667 mm. Production line could be more compact, save factory space, improve work efficiency.

Easy Operation

GLA series is a small machine but according to ergonomics best design to provide operator a convenient environment to install tooling and loading/unloading.

Chip Removal Solution

- ▶ The chip flute design with big bevel and size to let chips pass chip flute quickly to coolant tank. Make sure no chips remains and keep excellent processing accuracy.
- ▶ Optional rear discharge roll-out coolant tank and chip conveyor will not effects factory machine arrangement. It is also easy to connect with central chip disposal system to maximum chip removal.

Cutting Capability

Drill

Material : S45C Model : GLA-1500

Tools	Spindle Speed	Cutting Speed	Feedrate	Spindle Load
Ø25 mm	1,019 rpm	80 m/min.	0.15 mm/rev.	110%

Heavy Cutting

O.D. Before Cut	O.D. After Cut	Spindle Speed	Feedrate	Spindle Load
37.8 mm	31.8 mm	1,500 rpm	0.2 mm/rev.	114%

ADVANCED CONSTRUCTION

High Rigid Construct Design

- ▶ One-piece bed structure, headstock, turret and other coral components are designed by Finite Element Analysis (FEA). GLA series with high rigid structure by using high tension, high damping and low deforming MEEHANITE casting.
- ▶ X/Z axes adopt high accuracy linear guide ways design, with outstanding controllability and moving efficiency. In addition, sliding block been pre-loaded processing could eliminate the gap and then control thermal deformation to make sure axis direction with higher rigid construction.
- ▶ C3 class hardened and precision ground ball screw ensure the highest accuracy and durability. By using maximize pre-tension processing when assembly, thermal deformation could be decreased and machine keep stable accuracy even work long time.

Servo Indexing Turret

- ▶ The heavy-duty servo indexing turret achieves 0.2 second indexing times for adjacent stations and 0.5 second for stations at the opposite end of the disk. Any tool position can change the tool directly without pauses.
- ▶ All of GOODWAY machines use high precision positioning turret with Curvic Couplings. Curvic Couplings can provide not only the super cutting rigidity for turret but 0.002 mm on repeat positioning accuracy because the big contacting area from Curvic Coupling and auto centering.

Super Rigid Tailstock

- ▶ The optional tailstock with max. turning length 230 mm can provide the enough support rigidity for long shaft type workpiece, thereby avoiding the deviation of runout when workpiece is turning and suitable with machining requirement of high accuracy.
- ▶ The tailstock base adopts with fix type design and the movement of quill is programmable controlled. When choosing Manual mode, the quill can be moved forward with JOG mode and the tailstock center can support the center of workpiece more convenience and more precision. When choosing Auto mode, the movement of quill can controller by M code and force can be adjusted manually.

High Performance Spindle

- ▶ P4 class high accuracy spindle bearing inside headstock. Widely spaced for maximum strength provide the rigidity needed for heavy cutting and interrupted turning applications.
- ▶ By precision pulley reduction ratio, motor and spindle can achieve max. turning speed at the same time. Lower full HP output min. turning speed and increase torque to ensure motor reach maximum turning capability.
- ▶ Spindle is driven by high performance V-belt, maintenance is more convenient and decrease heat effect on spindle accuracy.

Optional Live Tooling Turret and C-axis

- ▶ The GLA series is available with an optional live tooling turret, C-axis can work on turning, milling, drilling and tapping tasks at the one machine to decrease setting error when moving work-piece between machines and save the machining time and manpower.
- ▶ GOODWAY 12 stations turret equip 6 live tools which are driven by AC servo motor which can provide ample power, in the form of torque. Now, even the toughest of jobs may be tackled without a sweat.

- ▶ GOODWAY live tooling turret utilizes servo motor on tool change and positioning. Dual direction for quick tool change is also available which can reduce the non-cutting time and increase the work efficiency.
- ▶ Spindle can switch to C-axis servo mode control by Cs-axis design. It can provide the quick and accurate indexing and satisfy the high efficiency production output.

OPTIONAL AUTOMATION SYSTEM

Gantry Loader

X-axis (Left / Right)	Stroke	1,500 mm
	Max. speed	1,667 mm/sec.
Y-axis (Up / Down)	Stroke	700 mm
	Max. speed	1,333 mm/sec.
Z-axis (Front / Rear)	Stroke	N/A (Opt.)
	Max. speed	N/A (Opt.)
C-axis	Stroke	180°
	Max. speed	1 sec./180° (pneumatic rotary cylinder)
Repeatability		± 0.05 mm
Jaw		3-jaw (Ø12 mm)

Stocker

Variable stocker can be chose according to different material type. Super compact stocker size can increase factory space usage.

Material	Disk type	Shaft type
Number of pallets	12	17
Max. work-piece diameter	Ø 150 mm	Ø 60 mm
Min. work-piece diameter	Ø 25 mm	Ø 30 mm
Stack height	350 mm	200 mm
Weight of work-piece / pallet	40 kg	5 kg

Twin Jaws Robot Arm

Programmable robot arm with twin jaws design can load and unloading the workpiece with variable shape and quick move to the required position. Easy operation and affordable.

Work-piece	Disk type		Shaft type
Max. clamping weight	1 kgx2	3 kgx2	5 kgx2
Max. clamping dia. x height	Ø80x60mm	Ø120x60mm	Ø60x200mm

Built-in Parts Conveyor

Compare to external parts conveyor, the built-in design can keep the coolant inside of machine to avoid the environment pollution. Meanwhile, there is no distance between operator and working area and keep the operating convenience.

Tool Presetter

Work-piece Inspection Probe

Auto Door

Light Curtain Safety Device

Pneumatic Work-Piece Positioning Detector

Apply pneumatic flow to detect work-piece and fit of clamping jaw surface. When not adjust closely to fit, robot arm will re-load again to ensure operation safety.

Robot Arm

Auto discharge device
It is available to do the customized integration.

Auto feeding device
Available with vibration feeder and bar feeder etc.

Work-piece size	Diameter	Ø60 mm
	Weight	1 kg
Conveyor (Z-axis)	Stroke	According to requirement
	Max. speed	84 m/min.
Robot arm	Stroke	300 mm
	Max. speed	71 m/min.
Jaw	Rotary angle	90°
	Travel of clamping jaw	10 mm
	Type of clamping jaw	Rotary twin jaw

STANDARD & OPTIONAL FEATURES

S : Standard O : Option
